

INTEGRATED CLINICAL TRIAL MANAGEMENT SOLUTIONS

Automating Processes & Delivering Powerful Efficiency Gains

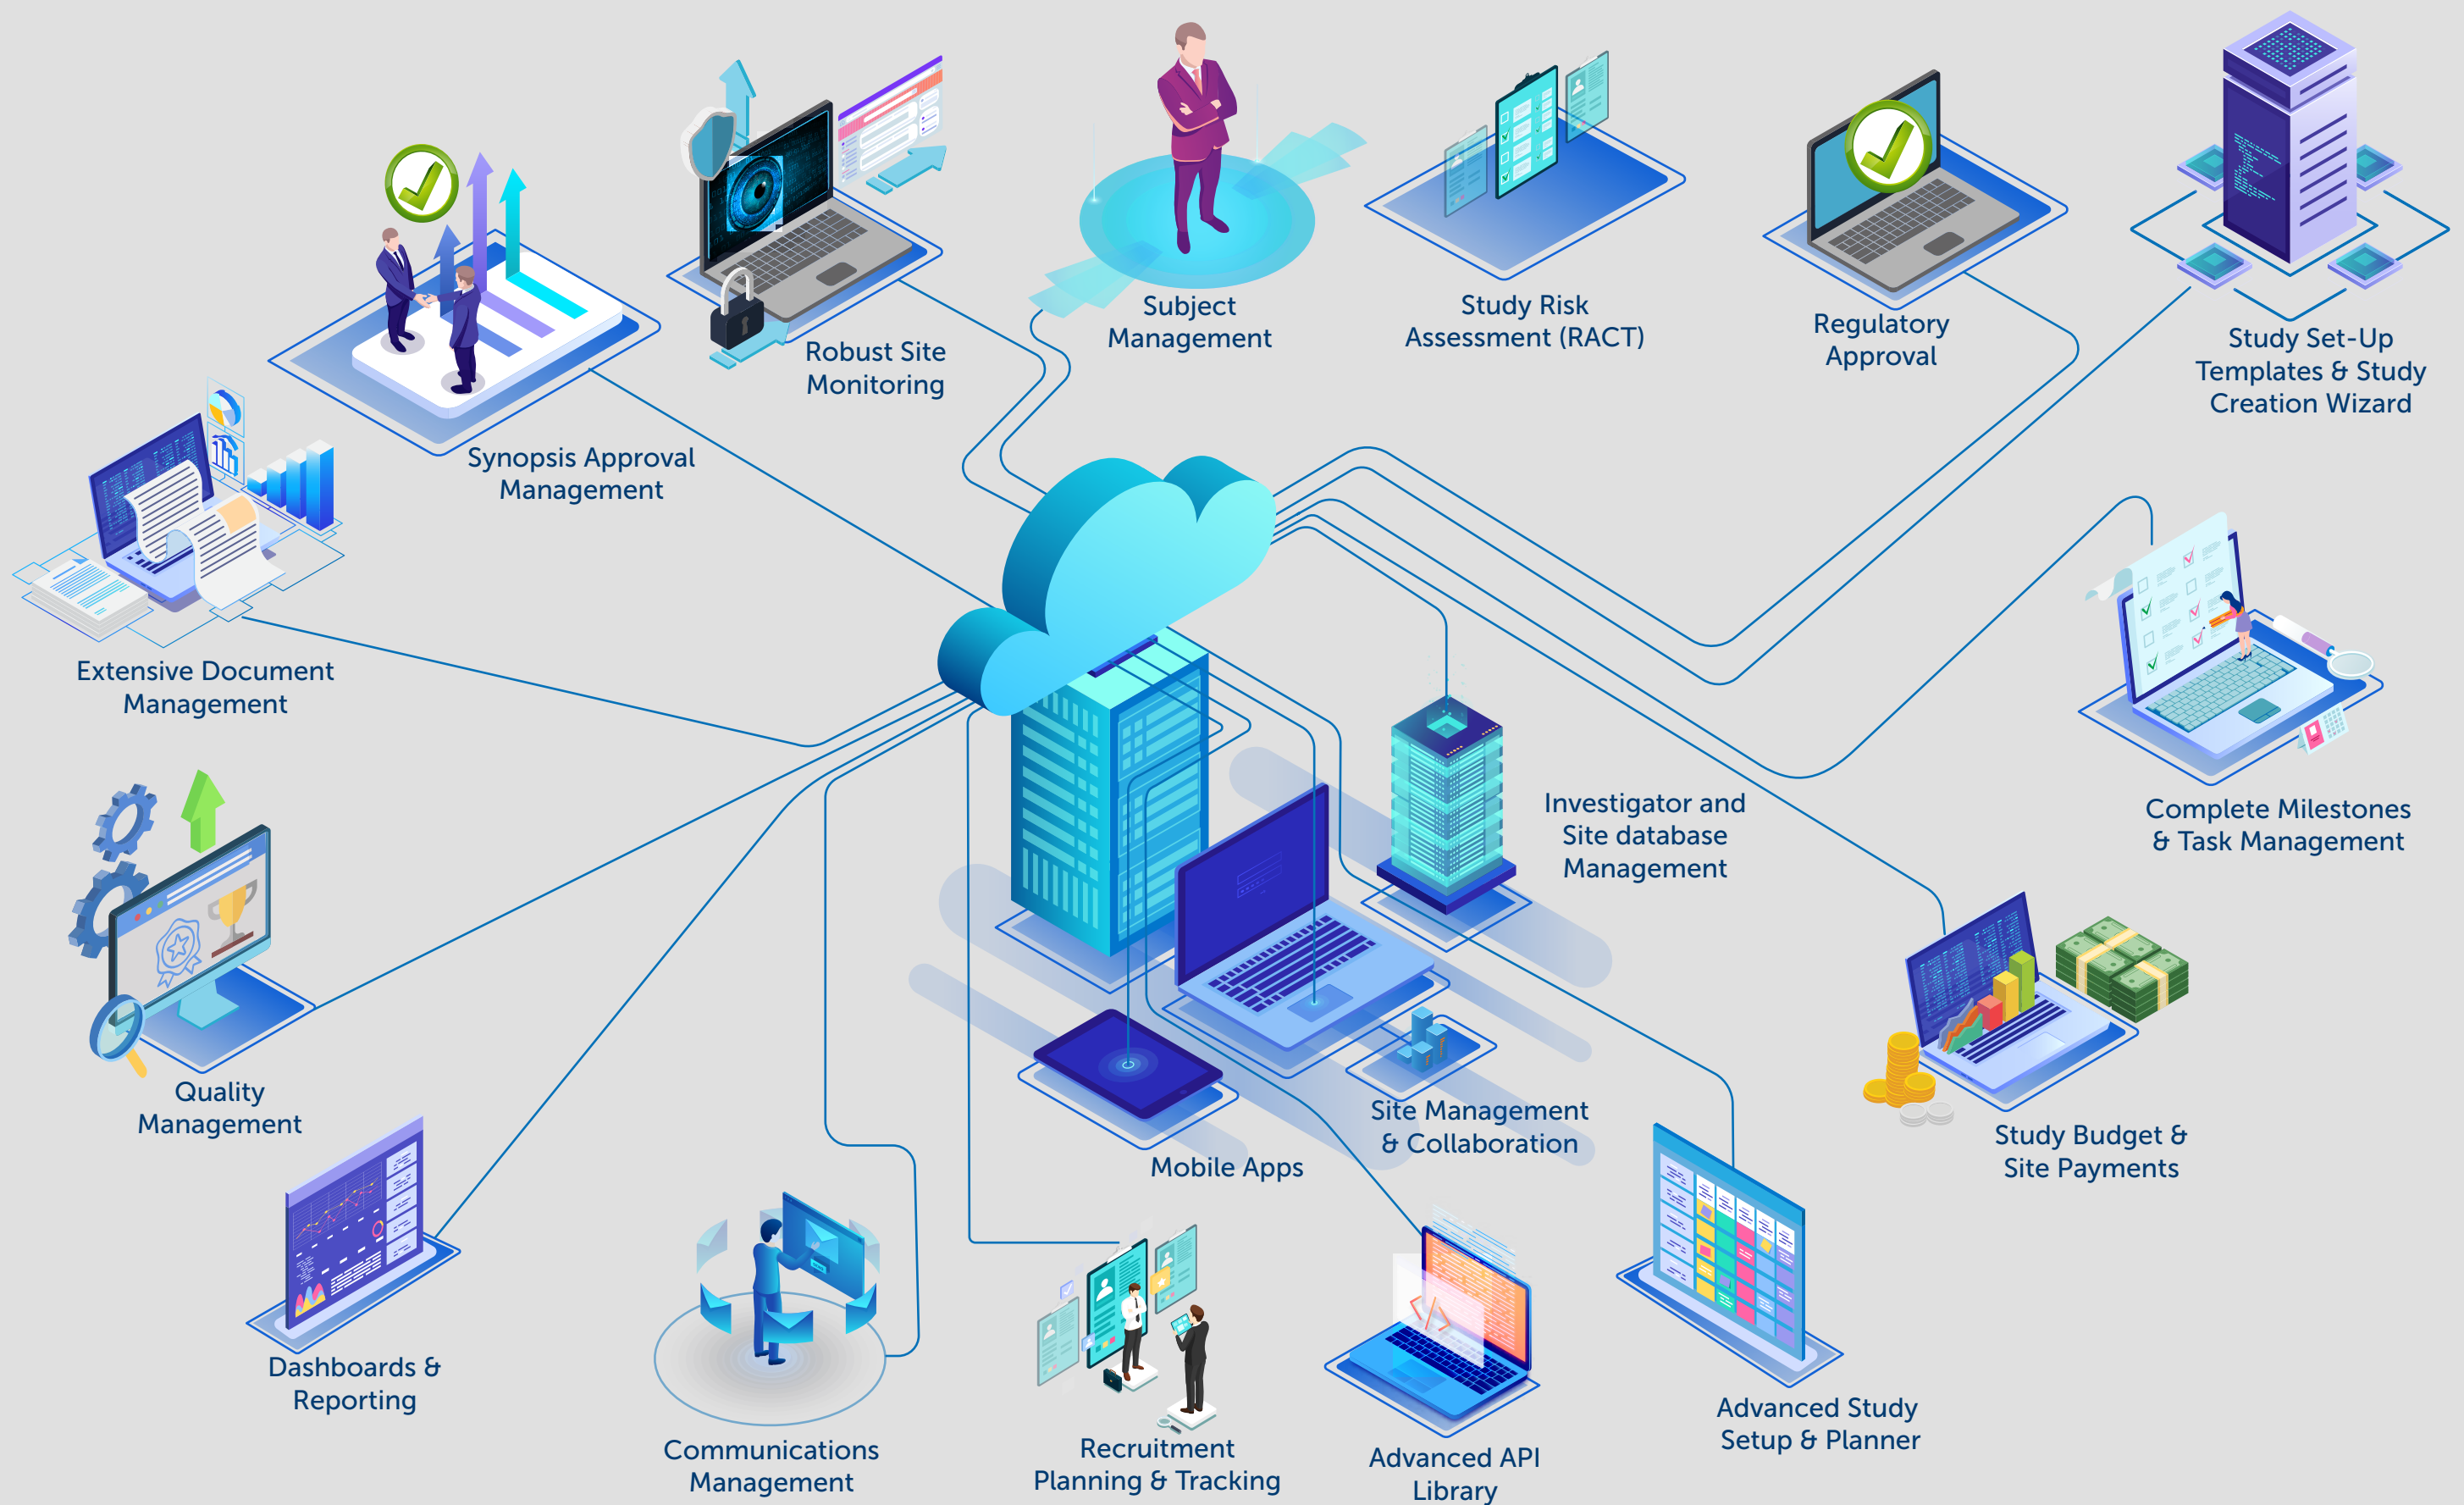

As the cost of drug development and time to market increases to exorbitant levels, it's time to look toward clinical trial management solutions that embrace advanced technologies to significantly improve quality, resource efficiency, and reduce overall time in bringing products to market.

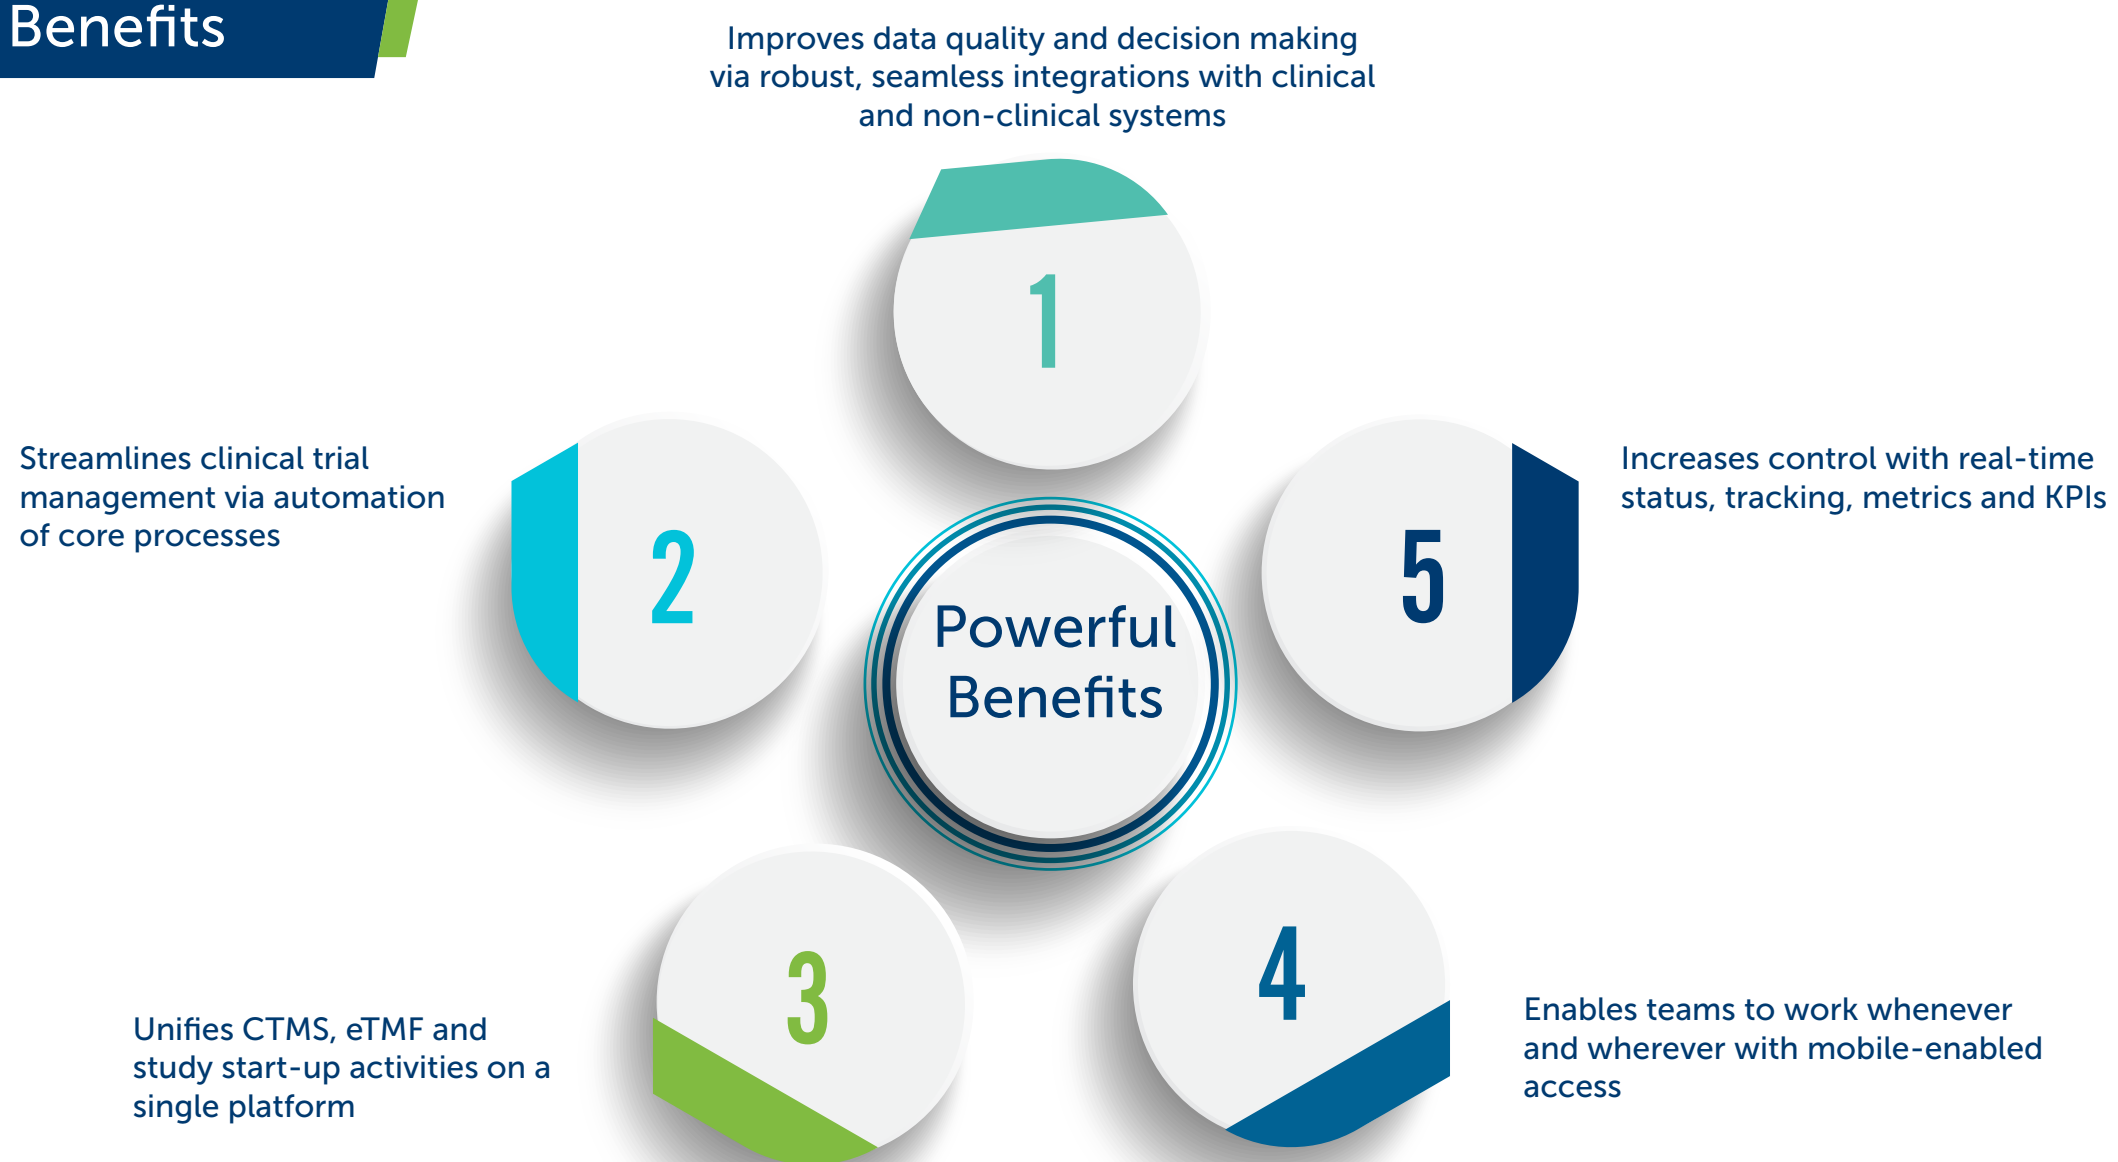

Top 10 Challenges

LifeSphere® CTMS – Empowering End-to-End Management of Clinical Trials

Based on 4 Key Tenets: Open Architecture – Multi-Tenant Cloud – Cognitive Computing & Automation – Industry Standard Practices

Delivering Powerful Benefits

Customer Successes

Used by pharmaceutical, biotech and contract research organizations of all sizes.

“We were looking for a complete eClinical platform that would enable us to grow and expand with greater speed and confidence. The integrated dashboards and eTMF further gives the sponsor a one stop solution to evaluate the health of the project and risk management on a continuous basis.

ArisGlobal clearly showed the advantages that a unified EDC and CTMS solution and out-of-box integrations with third-party systems would deliver. Their technology-advanced eDiary capability is unrivaled, and the support and training we've received has enabled us to leverage this unified solution to its fullest.”

- SIRO Clinpharm, a leading full-service contract research organization
